

# Service providers

# Service providers

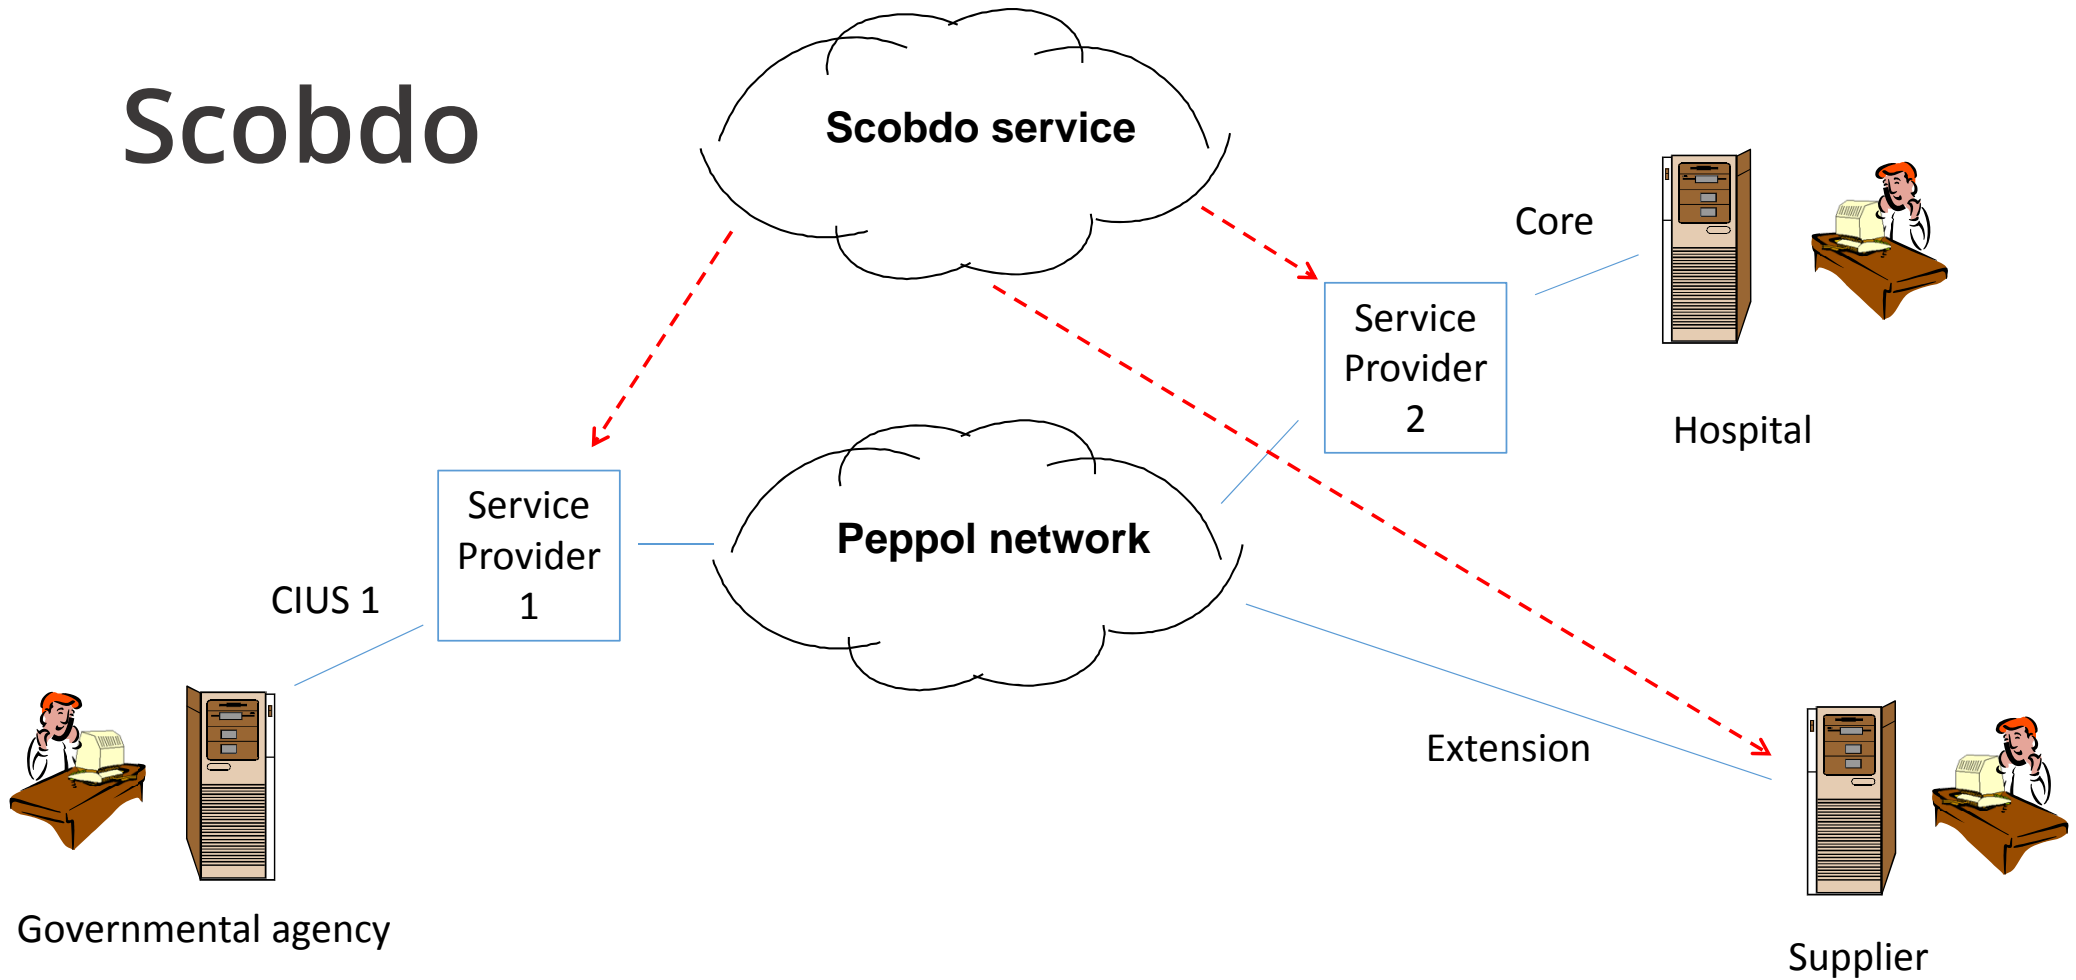

# Variants

# Documentation

- CIUSes and extensions are documented in PDF documents
- “Validation-artefacts” (Schemas and Schematron) exist, but only to validate invoices, not to configure systems
- With 10 syntaxes, CIUSes, extensions and versions 90 transformations need to be configured/developed
- If each service provider/software developer needs to extract these from the documentation, this will cost a fortune!

# Scobdo

# Scobdo

- Central repository (SVN) with machine readable specifications
- Function to create files to perform transformation between specifications
- Transformation files (XSLT) can directly be imported in service provider software and in standard ERP packages
