Introduction

For end users it must be easy to convert documents from one type to another type. The end product of the mapping and mapping generator are technical products.

Translator

The translator is an application in the eVerbinding platform. With this application a user is able to upload documents, identify document type and convert de document to another format.

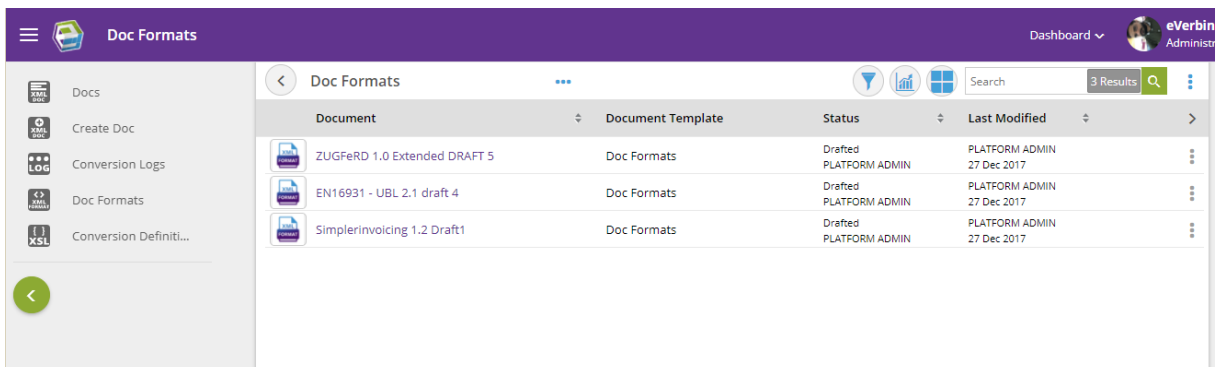

The items “Doc Formats” and “Conversion Definitions” are only visible for advanced users.

Setup translator

The setup consists in defining documents type and how they are identified. And define conversion possibilities based on conversion XSLT created by the SCOBDO portal.

Doc Formats

Several document formats can be defined.

A format definition is done base on a XPATH and the value returned.
