**Subject:** RE: IM0016215845 [JIRA] (SD-359) Validation of e-invoices

Hello and Happy New Year,

@Fred:

- I did double check on your UBL invoice file and I can confirm that it's valid on our test bed.
- If you want we can try to solve together the eDelivery sending problem or if this layer is not important for you we can proceed the testing of your invoice with our AS4 access point.
- I'll forward your question about Rule BR-CL-19 to the development team.

@Wim: I don't see this test. The last attempt is from 21.12.2017 16:29 in the SCOBDO domain with the [fred@flowcanto.com](mailto:fred@flowcanto.com) account.

Kind regards,

Denes Varszegi,

**Subject:** RE: IM0016215845 [JIRA] (SD-359) Validation of e-invoices

Hello and happy new year to you as well!

I have carried out the test 29 December, using my login name ([fred@flowcanto.com](mailto:fred@flowcanto.com)). The date and time in the report are OK.

To be sure you may run the test yourself, with the UBL file I sent (also attached to this mail).

Best regards,

Fred van Blommestein

Hello and happy new year,

Denes will be back on Monday, however, I will try to assist you.

In order to validate the report, could you please tell me when the test was carried out?

I used the date in the report, but I am unable to verify the success of this validation based on that date.

Kind regards,

---

**Subject:** RE: IM0016215845 [JIRA] (SD-359) Validation of e-invoices

Dear Denes,

My colleague Wim Kok was trying to perform a test with the AS2 and AS4 protocol, but was not yet successful, due to technical protocol issues. Our project, SCOBDO, is about semantic and syntax translation, not about protocols. We have tested the attached XML, that was the output of our translation tool, by uploading the file to the GITB. We got a successful report (also attached). Can you confirm that the UBL file validates?

Moreover, we found a possible error in the GITB. Rule BR-CL-19 states: "Invoiced note subject code SHOULD be coded using UNCL4451". UNCL4451 is a list of alfa-3 codes (see <http://www.unece.org/fileadmin/DAM/trade/unttdid/d16b/tred/tred4451.htm>), but the test lists a set of numeric codes. Valid UBL messages that contain an alfa code are invalid according to GITB. Can you please look into that?

Thank you and a happy new year!

Best regards,

Fred van Blommestein

Hello Fred,

How is your testing?  
Let me know if you need help.  
Since the new SOD is still draft, I'm sending you again the latest version.

Kind regards,

Denes Varszegi,

Dear Fred,

Sorry for the delay, this service procedure (and the service offering document) has just changed and we had to wait for it.

This service is published on this CEF site:  
<https://ec.europa.eu/cefdigital/wiki/display/CEFDIGITAL/CEF+eInvoicing+Conformance+Testing>

You can find the general information about this testing service there.

Normally you can find the documentation there as well, but in this case I attached the latest one for you in this mail.

Please read it, check the procedure, methods and the technical requirements.

As you'll see there is a bunch of methods for testing the eInvoices.

Our suggestion is that you can use all of them for "testing" purposes, but for the "official" test which will be provided to INEA use only the eDelivery methods (AS2 or AS4). The reason of this is that only the eDelivery testing sessions are recorded in the testing portal. The reports could be downloaded later or you can refer to any of the completed tests.

For the eDelivery testing methods you have to be registered, the others could be anonymous.

I did the initial registration for you so you can login to the testing portal, and try any of the methods.

The testing portal URL: <http://invoicing.westeurope.cloudapp.azure.com:9000>

Login:

E-mail Address: [fred@flowcanto.com](mailto:fred@flowcanto.com)

Password: Scobdo123 (you can change)

Please contact us if you have any problem or question.

Kind regards,

Denes Varszegi,

Dear madam/sir,

We are finalizing a CEF funded action, 2015-EU-IA-0054 ("SCOBDO"). In the action we are developing transformation services for e-invoices (Legacy to Core, Core to CIUS, etc.). One of the CEF requirements is that we have the generated invoices validated by you. Can you notify me what the procedure is? Can we e.g. send you some EN16931 compliant invoices for you to validate? We expect our results to be ready for validation by next week.

Kind regards,

Fred van Blommestein,

[fred@flowcanto.com](mailto:fred@flowcanto.com)
